PREFACE

This report describes surveys administered to members of units participating in an Army reserve training enhancement program known as "Bold Shift." The program, initiated in 1992, focuses on high-priority units in the Army reserve components (RCs). U.S. Army Forces Command asked RAND to assist in assessing Bold Shift during its pilot phase. The surveys collected data to support the assessment and to analyze general issues of training readiness in RC units.¹

This document includes survey administration procedures, data on response rates, and copies of the five different questionnaires that were used for various groups of respondents. The work was done under a project entitled "Reserve Component Peacetime and Post-Mobilization Training," sponsored by the Commanding General, U.S. Army Forces Command, and was carried out under the RAND Arroyo Center's Manpower and Training Program.

THE ARROYO CENTER

The Arroyo Center is the U.S. Army's federally funded research and development center (FFRDC) for studies and analysis operated by RAND. The Arroyo Center provides the Army with objective, independent analytic research on major policy and organizational concerns, emphasizing mid- and long-term problems. Its research is carried out in four programs: Strategy and Doctrine, Force Development and Technology, Military Logistics, and Manpower and Training.

Army Regulation 5-21 contains basic policy for the conduct of the Arroyo Center. The Army provides continuing guidance and oversight through the Arroyo Center Policy Committee (ACPC), which is co-chaired by the Vice Chief of Staff and by the Assistant Secretary for Research, Development, and Acquisition. Arroyo Center work is performed under contract MDA903-91-C-0006.

SUMMARY

This report describes surveys of units participating in an Army reserve training enhancement program, known as "Bold Shift." The program, initiated in 1992, focused on high-priority units in the Army reserve components (RCs). RAND was asked to assist in assessing Bold Shift during its pilot phase. The surveys collected data to support the assessment and to analyze general issues of training readiness in RC units. Five survey instruments were developed: a Unit Member Survey; Unit Leader Survey; Operational Readiness Evaluation (ORE) Supplement; Battalion and Brigade Staff Supplement; and Unit Leader Battle Skills Course (ULBSC) Participant Survey.

This document briefly describes survey development, administration, and response rates and contains a copy of each questionnaire. Questionnaires were sent to each of 296 company-sized RC units participating in the Bold Shift program.² In each unit, the commander and first sergeant were asked to complete the leader survey, and all other members were to complete the member survey. RAND received returns from 261 units (an 88-percent return rate). This resulted in 18,504 completed questionnaires for the unit member survey and 649 for the leader survey. The questionnaires were confidential and anonymous, normally administered in groups during a weekend drill period.

In addition to the unit member and leader surveys, the ORE supplement was sent to leaders in 49 units; RAND received 52 completed ORE survey forms from 32 of those units. The Battalion and Brigade Staff Supplement was sent to 46 units; 41 of those units returned 220 completed forms. The ULBSC survey was sent to 300 individuals who had attended the course; 182 responses were obtained. Comparison of unit attendance rosters with survey returns indicated that questionnaires were completed by 94 percent of unit personnel who were present during the drill period.

²Such units included headquarters companies for battalions and brigades.

1. INTRODUCTION

In 1991, U.S. Army Forces Command began considering initiatives to improve the readiness of Army roundout and round-up brigades, with the potential to be applied to other elements of the Army's reserve components (RCs). The resulting concept, "Bold Shift," included changes in training strategy, resource levels, and active-reserve relationships.

During 1992 Bold Shift operated as a pilot program in selected units, incorporating both combat and support formations. The combat units included all seven roundout and round-up brigades in the Army National Guard.¹ Altogether the elements of these brigades included 192 company-sized units. In addition, Bold Shift incorporated nondivisional support elements, such as transportation, engineer, artillery, medical, and chemical units. There was a total of 82 of these units, almost all of which were company-sized.² Thus, altogether, 274 company-sized units participated in the 1992 pilot program.³ The resulting mix of Army National Guard and U.S. Army Reserve units came from all regions of the country and represented a wide range of armor, infantry, field artillery, and support units.

Forces Command asked RAND to assist in assessing the Bold Shift program. Surveys of RC participants were a key element of the assessment. Five survey instruments were developed:

¹These brigades are the highest-priority RC combat elements that would deploy to a wartime theater. They include the 27th Infantry Brigade, New York; 48th Infantry Brigade, Georgia; 81st Infantry Brigade, Washington; 116th Armored Brigade, Idaho/Oregon/Utah; 155th Armored Brigade, Mississippi; 218th Infantry Brigade, South Carolina; and 256th Infantry Brigade, Louisiana.

²A small number were engineer battalions, aviation groups, or medical detachments, which are treated as "companies" in the discussion below. Of the total of 82 units, 35 came from the U.S. Army Reserve and 47 from the Army National Guard.

³In addition, some companies were split into detachments or other sub-elements that were located in different towns. During the survey, some of these detachments were found to be so far removed from their parent company headquarters that they were treated as separate units for survey purposes. This treatment added 22 additional detachments, which increased the total number of surveyed entities to 296.

- Unit Member Survey (most personnel in the RC units)
- Unit Leader Survey (the unit commander and the senior sergeant in the unit)
- Operational Readiness Evaluation (ORE) Supplement (for senior personnel in units that received an ORE)
- Brigade and Battalion Staff Supplement (for commanders and staff in battalion and brigade headquarters units)
- Unit Leader Battle Skills Course (ULBSC) Participant Survey (for personnel who took this special leader development course).

The results from these surveys, in conjunction with other data, were used to assess the Bold Shift program and to analyze Reserve Component training readiness issues.⁴

The remainder of this report is organized as follows. Section 2 describes the instrument development and administration. Sections 3 through 7 reproduce the questionnaires for each of the surveys.

⁴For results, see R. E. Sortor, T. F. Lippiatt, J. M. Polich, and J. C. Crowley, *Training Readiness in the Army Reserve Components*, Santa Monica, Calif.: RAND, MR-474-A, 1994.

2. SURVEY INSTRUMENT DESIGN AND ADMINISTRATION

SURVEY INSTRUMENT DEVELOPMENT

Five survey instruments were administered to RC participants in the Bold Shift program. These instruments were used to identify how participants reacted to Bold Shift initiatives and training opportunities, whether the various initiatives should be continued, and how RC training might be improved.

The two main surveys were unit member and unit leader surveys. Supplementary questionnaires were administered to Operational Readiness Evaluation (ORE) participants and battalion and brigade staff. Participants in the Unit Leader Battle Skills Course (ULBSC) completed a separate questionnaire. Each of these questionnaires is discussed in more detail below.

The survey questions were developed by RAND researchers with assistance from Forces Command, the National Guard Bureau, and other Army personnel. An initial pretest was conducted using a single survey instrument with approximately 25 members and leaders from one RC unit. The pretest provided participants with an opportunity to discuss the strengths and weaknesses of the instrument, whether any questions were unclear or confusing, and whether the survey was asking about the right issues. Thereafter, a second pretest of the instruments was conducted with a revised form, using personnel from a second unit. In both instances, the pretest groups included representatives from several grades and skills who had participated in Bold Shift training during the year.

As a result of the pretests, it was evident that many questions were appropriate only for specific groups of individuals and that it was too cumbersome to include all of the relevant and important questions in one instrument. For this reason, separate survey instruments were developed to address the various personnel and organizational levels and the specific training focus for selected initiatives. By using separate questionnaires and targeting each to a specific audience, the surveys

were able to address issues covering the full range of training initiatives and experiences relevant to the Bold Shift program.

Unit Member Survey

The unit member survey encompassed several topics: (1) soldier experience and qualifications, (2) unit participation and availability, (3) 1992 annual training experience, (4) 1992 inactive duty training (IDT) experience, (5) overall assessment of 1992 training, and (6) individual characteristics and background of the soldier. With few exceptions, all members of Bold Shift units were expected to complete the Unit Member Survey. The exceptions were persons who completed the survey of leaders (see below).

Unit Leader Survey

A separate leader survey was administered to the commander and senior noncommissioned officer (NCO) in each company-sized unit. The Unit Leader Survey included the questions from the Unit Member Survey, plus additional questions about leader training and schooling, unit readiness, and the unit's full-time support.

Brigade and Battalion Commanders and Staff Survey Supplement

Brigade and battalion staff were asked to complete the leader survey described above, plus a supplement that included questions about their command and staff training and the Tactical Commanders Development Course (TCDC). TCDC was a one-week training program based on mobilization training originally provided by the School of Command Preparation at Fort Leavenworth. During TCDC, participants were taught basic staff skills and conducted simulation-based exercises.

Operational Readiness Evaluation Survey Supplement

The Operational Readiness Evaluation (ORE) supplement was sent to the commander and senior NCO of each unit that participated in an ORE. The ORE involved continental U.S. Army teams performing a readiness exercise in which they evaluated personnel (availability of personnel who met individual training and legal requirements to be deployable), supply (availability of required equipment), maintenance (serviceability

of on-hand equipment), and training readiness (the unit's ability to perform its organizational mission). The compliance phase of the ORE was normally accomplished during the week at the unit's armory with the full-time personnel and did not require the presence of the unit members. The training phase was conducted during either a unit's IDT or annual training period and did involve unit members and leaders. The ORE survey questions addressed both the training and compliance phases of the ORE, and the perceived benefits of the exercise.

Unit Leaders Battle Skills Course Survey

The ULBSC questionnaire was sent to personnel from 15 units who attended such a course during 1992. The two-week-long ULBSC was developed for the NCO and officer leadership of company-sized units. It was based on the Light Leader Course developed at the Army's Infantry School and involved collective training exercises for participants serving as members of squads and platoons. The exercises were designed to improve technical and tactical proficiency, training skills, and unit cohesion. The ULBSC survey collected participants' opinions and reactions to the course.

SURVEY ADMINISTRATION AND RESPONSE

Questionnaires were shipped to units beginning in September and October 1992, as soon as possible after the unit's annual training period. Unit members and leaders completed the questionnaires during the first available monthly drill session (normally scheduled on a weekend). To protect the participants' anonymity, the surveys were self-administered, confidential, and voluntary. Completed forms were returned to RAND without identification of individual respondents. Each shipment included information regarding the rationale for the survey, detailed instructions about survey administration, and a letter from the Deputy Director of Operations, Headquarters Forces Command, requesting that units respond. RAND contacted each unit before survey administration to ensure that they had received the proper materials and understood their instructions. To maximize participation, members of Forces Command's Bold Shift Task Force contacted those units that had not returned surveys soon after the units' expected weekend drill dates.

Each unit's point of contact was asked to return a master attendance roster with the completed questionnaires; 82 percent of the units returned rosters with their surveys. Each roster indicated whether unit members were "present," "absent," or "present, but did not participate." With the information provided on the rosters, we calculated three types of response rates for the Unit Member Survey. The first is based on the number of units that returned surveys; the second on the number of names listed on the unit roster compared with the number of survey returns; and the third on the actual number of soldiers present during the weekend when the survey was administered, compared with the number of survey returns. This distinguished between cases when individuals were in attendance but did not complete the survey and cases when individuals were not in fact present at the drill session.

As shown in Table 1, the overall response rate was 88 percent for units returning surveys, 65 percent for assigned individuals responding from all the participating units, and 94 percent for those unit members who attended the drill at which the survey was administered.

Table 2 shows the number of surveys of each type returned and included in our sample for analysis. Surveys were mailed to the members and leaders (commanders and first sergeants) of 296 units. RAND received completed surveys from 261 of those units (an 88 percent return rate, as noted above).⁵ This resulted in 18,504 complete Unit Member Surveys and 649 Unit Leader Surveys. The ORE supplement was sent to 49 units (for commanders and first sergeants to complete); RAND received 52 completed ORE surveys from 32 of those units. The Brigade and Battalion Staff survey supplement was mailed to 46 units; 41 of those units returned 220 completed forms. We received 182 complete ULBSC surveys from the 300 shipped to selected individuals in various units who attended ULBSC during the year.

^aULBSC attendees were from different units from other survey respondents.

Analysis of the response rates indicated there was no reason to suspect bias in the results because of nonresponse from any particular category of unit or personnel. The high response rates by personnel who were present at drills reflected the dedication and interest on the part of the members and leaders of the Bold Shift units.

⁵Two units reported that they did not participate in any Bold Shift activities and therefore did not respond to the survey.
